PRICE BREAKTHROUGH

The wait-loss experts have done it again!

512Kbyte SemiDisk™ with SemiSpool™

$1095

Time was, you thought you couldn't afford a SemiDisk. Now, you can't afford to be without one.

	256K	512K	1Mbyte
SemiDisk I, S-100	$895	$1095	$1795
IBM PC		$1095	$1795
TRS-80 Mdl. II, CP/M		$1095	$1795
SemiDisk II, S-100		$1395	$2095

Battery Backup Unit $150
Version 5 Software Update $30

Time was, you had to wait for your disk drives. The SemiDisk changed all that, giving you large, extremely fast disk emulators specifically designed for your computer. Much faster than floppies or hard disks, SemiDisk squeezes the last drop of performance out of your computer.

Time was, you had to wait while your data was printing. That's changed, too. Now, the SemiSpool print buffer in our Version 5 software, for CP/M 2.2, frees your computer for other tasks while data is printing. With a capacity up to the size of the SemiDisk itself, you could implement an 8 Mbyte spooler!

Time was, disk emulators were afraid of the dark. When your computer was turned off, or a power outage occurred, your valuable data was lost. But SemiDisk changed all that. Now, the Battery Backup Unit takes the worry out of blackouts.

But one thing hasn't changed. That's our commitment to supply the fastest, highest density, easiest to use, most compatible, and most cost-effective disk emulators in the world.

SemiDisk.
It's the disk the others are still trying to copy.
